

**2019 Michigan Surgical Quality Collaborative (MSQC)**  
Collaborative Quality Initiative Performance Index Scorecard

Measure #	Weight	Measure Description	Points
1	8	<b>Collaborative Meeting (2) - Surgical Clinical Quality Reviewer (SCQR)</b>	
		2 meetings	8
		1 meeting	4
		0 meetings	0
2	8	<b>Collaborative Meeting (2) - Surgeon Champion</b>	
		2 meetings	8
		1 meeting	4
		0 meetings	0
3	5	<b>Conference Calls (3) - SCQR</b>	
		2 or more calls	5
		1 call	3
		0 calls	0
4	5	<b>Conference Calls (3) - Surgeon Champion</b>	
		2 or more calls	5
		1 call	3
		0 calls	0
5	4	<b>Follow Up Rate (1/1/2019 - 12/1/2019)</b>	
		30 Day Follow Up Rate $\geq$ 80%	4
		30 Day Follow Up Rate $<$ 80%	0
6	70	<b>Quality Improvement Initiative (QII)</b> QI Implementation scores will be prorated based on specific deliverables <sup>1</sup> (1/1/2019 - 12/1/2019)	
		Scores $\geq$ 95 points on selected QII	70
		Scores 75-94 points on selected QII	60
		Scores 50-74 points on selected QII	50
		Scores 25-49 points on selected QII	35
		Scores 1-24 points on selected QII	20
No implementation	0		

<sup>1</sup> For the 2019 Site Specific Quality Improvement Initiative (QII), sites will choose from **one** of the following:

- A. Colectomy Care Pathway
- B. Postoperative Opioid Prescribing

<b>Measure 6, Option A: Colectomy Care Pathway</b>	<b>Point Value</b>
Demonstrate 80% compliance with the identified preoperative process measures	20
Demonstrate 80% compliance with the identified intraoperative process measures	20
Demonstrate 80% compliance with the identified postoperative process measures	20
Conduct and document at least one multidisciplinary meeting that includes surgeons, nurses, quality, pharmacy and other relevant staff to discuss and establish a comprehensive colectomy care pathway by March 30, 2019.	20
Create a comprehensive colectomy care pathway that includes preoperative, intraoperative, postoperative, and post-discharge processes. Submit this colectomy care pathway to the MSQC Coordinating Center with 2019 project submission.	20

<b>Measure 6, Option B: Postoperative Opioid Prescribing</b>	<b>Point Value</b>
90% of patients having a laparoscopic appendectomy, laparoscopic cholecystectomy, inguinal, femoral or umbilical hernia repair, or hysterectomy will receive the recommended amount of opioid (or less) at discharge as identified by Michigan OPEN as the current recommendation on January 1, 2019.	40
100% of patients have a complete discharge opioid prescription in the workstation for all of the included procedure types	15
75% of patients have an email address for 90-day PRO assessment for all of the included procedure types	5
Conduct and document at least one multidisciplinary meeting that includes surgeons, nurses, quality, pharmacy and other relevant staff to discuss and establish a comprehensive pain management care pathway for two of the included procedure types by March 30, 2019.	20
Create a comprehensive pain management care pathway that includes preoperative, intraoperative, postoperative, and post-discharge processes for two of the included procedure groups. Submit this pain management pathway to the MSQC Coordinating Center with 2019 project submission.	20
